

POOL PLATFORM WEIGHT CHART

Plastic tubes are less dense than water, so platforms still float (even if tubes are full of water).
You have to compensate for the platform's buoyancy with weights

OPEN PLATFORMS - Can use Fitness/Scuba weights on bottom panels

CLOSED PLATFORMS - Best to use the "internal" or "snap" PVC weights

The weights are only recommendations - approximately 5 lbs/cube

You can start with less and keep adding as needed.

The more weights you use, the more the platform will stay put - no limit.

Results will vary depending on the model, water type, and depth
