

PHUNZONE

STRAIGHT SLIDE ASSEMBLY

Please note: the special notched panels look like regular panels but on the assembly plans we use these graphics to make them stand out.

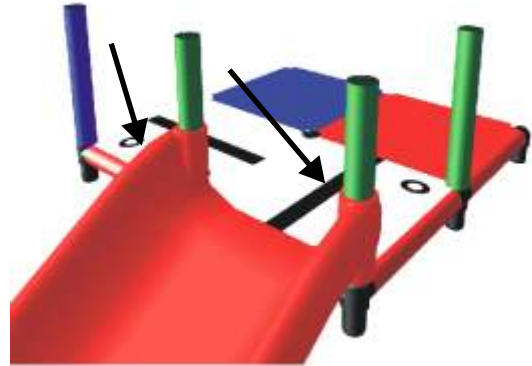

Step 1

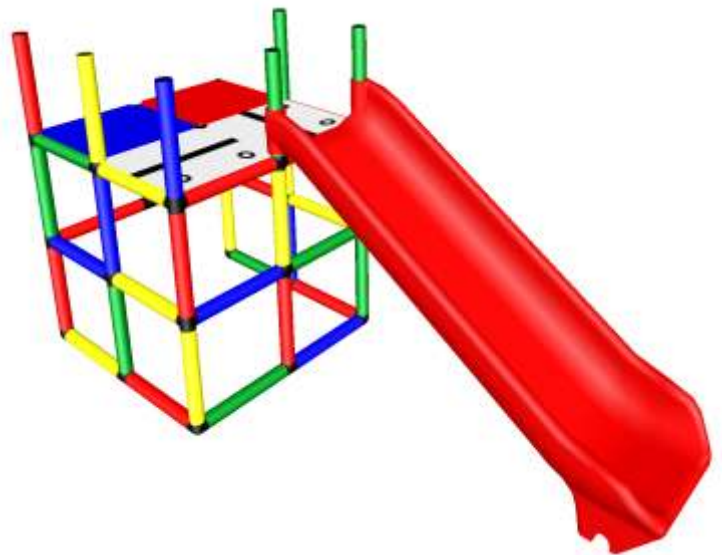

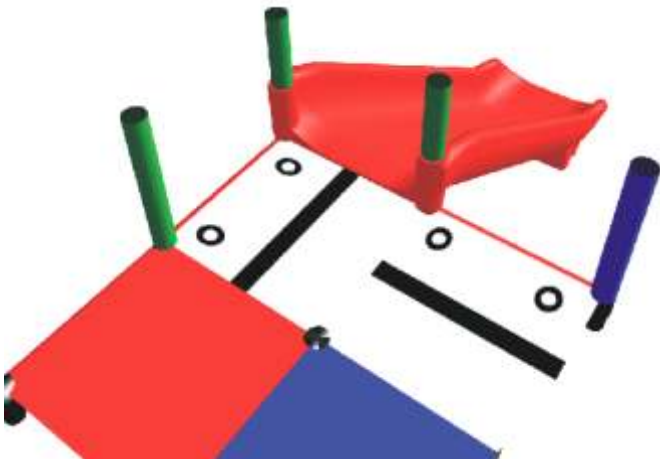

- Ensure that panels are lined up correctly
- ½ circle notches on panel are on the same side as the plexiglass

Step 2

- Insert 35 cm vertical slide tubes
- Ensure the tube holes face away from plexiglass

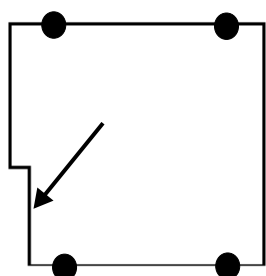

- Top of slide mounts slip over the 35 cm tubes

RESIDENTIAL PLAY STRUCTURES

All Phunzone residential playground designs with slides also include the plexiglass panels and the specially notched platform panels

Plexi for red slide
Notched plexi panels
are required on both
sides of the red slide

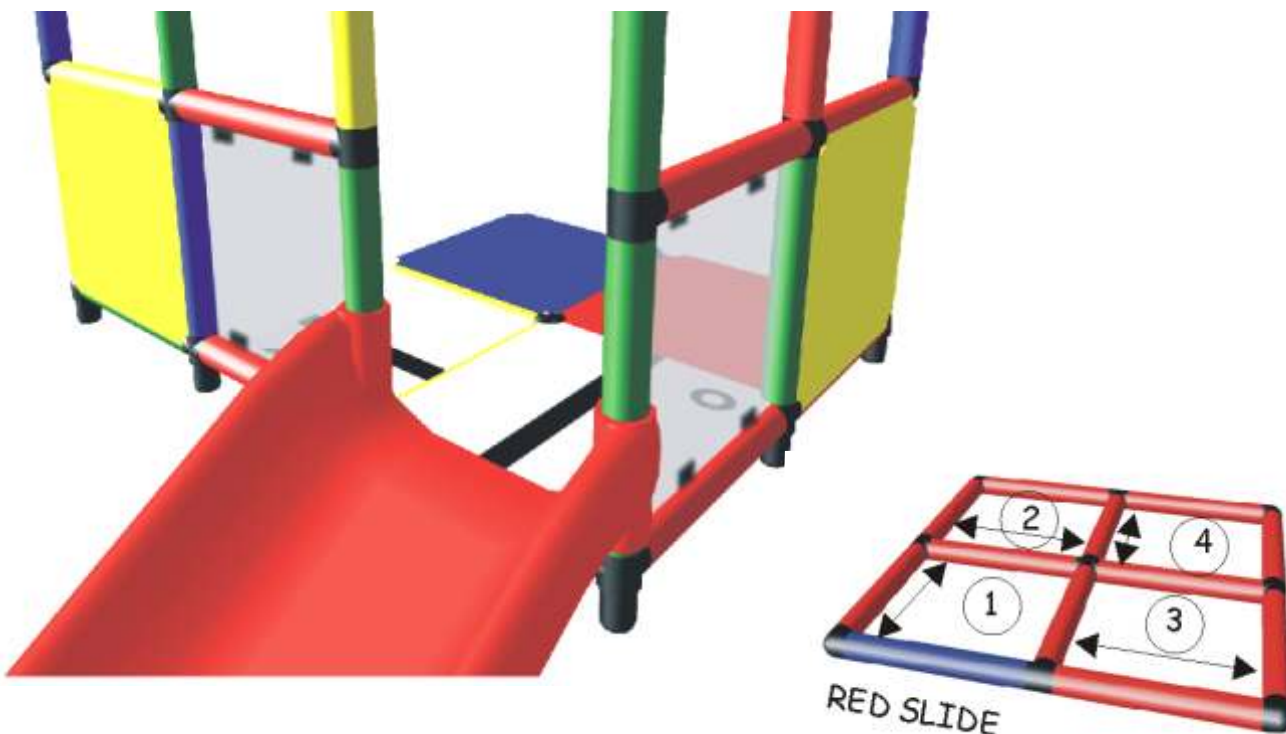

For straight slide mounting, you
need to use platform panels with 2
notches for U-clips to hold vertical
plexi panels

This is how we show the notched
panel on the detailed instructions.

Note. This is just a graphic! The
actual panels look like normal
panels, except they will have some
notches cut out on one side.

Step 3 (See plexiglass panel instructions)

- Ensure platform panels are oriented as per the diagram
- NO NOT LOCK IN ANY TUBES or PANELS IN THE AREA OF THE PLEXI YET
- Insert special "U" - shaped plexi clips into bottom and top "horizontal" tubes
- Platform panels will have special notches to accommodate the plexi clips
- Insert the Plexi panel onto the bottom clips first
- Rotate the plexi panel into a vertical position
- Align the top of the plexi with the upper U-clips
- Make sure the upper tube with plexi screws allows clearance for the plexi panel
- Push down top tube section so the plexi panel is in the upper U-clips
- Close and lock in all the tubes

Proper panel alignment is important to
install Red Slide
