

PHUNZONE

SPECIAL PARTS

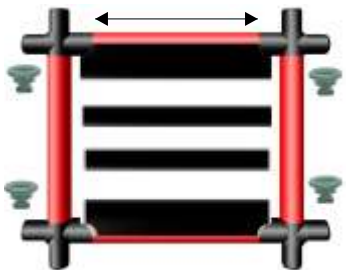

NOTE: On the level-by-level plans, all parts are marked with special stripes, dots etc

- markings are designed to help you where special parts are needed
- there are "NO" parts that actually have stripes or similar markings on them
- where possible, we mark parts with masking tape or other removable tags to help you identify the parts

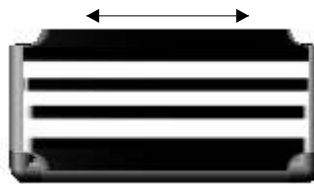

All standard tubes have just 2 holes. In order to accommodate special panel configuration for play structure models, extra holes are drilled in "special" tubes at 90 and 180 degrees

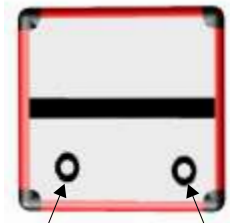

Panels have to be inserted in the direction we indicate. Please orient them according to the directions in the plans

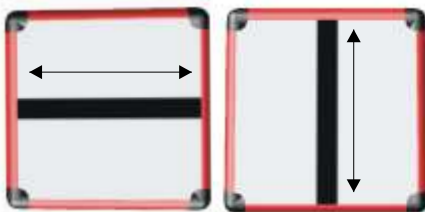

40x40 panels - mounted "horizontally" to either 90 or 180 degree tubes

20x40 panels - mounted "horizontally" to either 90 or 180 degree tubes

For slide platform, use "notched" panels to allow U-clips for vertical plexi panels

On platforms, panels must be sequentially rotated for proper tube hole match-up.

Dots: Shows panels with "trimmed" edge(s)
 - Full trim (placed vertically on platforms)
 - Half trim (used with top-cap netting)
